

Caring for a baby can be challenging at times. Although you will have lots of great moments, you may also have some worries about what is best for your baby. One of the hardest times can be when baby cries, and you can't work out why. This can be very frustrating.

Why babies cry

Crying is how babies communicate. Sometimes they are telling you something is wrong. Sometimes they just want and need your attention and love. Crying does not mean your baby is naughty.

Often, you won't be able to find a reason for your baby crying. This can be very frustrating.

If your baby won't stop crying, have a look at the helpful checklist in this brochure for tips on crying.

Never, ever shake a baby

The number one reason why babies are shaken is because their caregivers become angry or frustrated.

Shaking a baby can cause:

- permanent brain damage
- paralysis
- blindness
- deafness
- seizures
- broken bones
- developmental delay
- death.

You have the power to protect. When your baby won't stop crying, be strong enough to walk away, take a break and come back ready to comfort your baby.

"After a few minutes away, I feel 100% better. I am calmer and happy to comfort her."

If you think your baby has been shaken, get help straight away. Don't let fear or pride stop you. It could save your baby's life.

Phone 111 for urgent medical help.

► Read over for a helpful checklist and tips on crying.

Crying checklist

- Cuddle your baby
- Try offering a feed again
- Change the nappy if it is wet or dirty
- Make sure your baby's clothing is not too tight
- Make sure your baby isn't too hot or cold
- Burp your baby (wind pain can be very uncomfortable)
- Wrap and hold baby safely in a light weight blanket
- Is baby tired? Put baby down somewhere safe to sleep.

I've done all this and baby's still crying... now what?

- Hold your baby close, massage their back, sing, hum or talk
- Try a sling or baby backpack if you have them
- Give baby a warm soothing bath or take one together. Never leave baby unattended in the bath
- Put baby in a stroller and go for a walk or in a car seat for a short drive.

If you are worried baby is unwell, contact your midwife, GP or Plunket nurse.

Never leave your baby alone with someone you think might lose control.

► Turn over for helpful contacts you can call.

Keeping your baby safe

Have a plan of what you will do if your baby keeps crying and you become upset or angry.

If you think you might lose control, do not pick up baby!

Walk away

If you're holding baby, put baby in a safe place and walk away. Leave the room.

Take a break

Check baby often, but do not pick baby up until you feel calm.

Try doing something that usually relaxes you, like a quick shower or a cup of tea.

Talk to someone

Call a relative, friend or trusted neighbour to give you a break.

Don't be embarrassed. It's OK to know when you've reached your limit.
